

Graphics #flushyourmeds Scott Barry ;
 By Scott A. Barry / Scott A Barry / Scott Alan Barry ... ;
 I have to talk about GPUS instead BC FBI Special Agent Mike
 Moore says
 I have have to be PC now BC I shitposted a Manuscript that said
 something
 Wacist that is why I have to correct myself and be a PC ****
 right now ... ;
 I am the ***HOLE to tell you the truth, just as is ... ;
 You have to spoof your mac address to Random, use Google or
 Quad Nine DNS 88889999, you need the Ultimate Hosts File Black
 List ... ;
 VPNS are Snake Oil, you need to SSH Tunnel For Free using
 Servers ... ;
 Tor is already compromised, there is no way to be anonymous ...
 ;
 Ping Tunneling is very easy to do, you could get a Monkey to do
 it ... ;
 Anyone can partition a Hard Drive or SSD with fdisk -l and
 gparted ... ;
 Anyone can wipe sectors with dd yes cat or shred -vzn 5 echo ""
 >/dev ... ;
 None of this is new or special, I have no life, you are a CUSIP
 Number ... ;
 I am the Uncool Guy BC I have Inegrated Graphics,
 I am Uncool for Using Arch Linux, so My jist is if
 you want a GPU for both Linux and Windows USE AMD and
 also External GPUS are Garbage, Just put one in a PCI
 Slot ... ;
 Just some stuff for noobs, Chromium and Firefox are my only
 Browsers, to make them work, Ublock Origin, Privacy Badger,
 Decentraleyes, Canvas Blocker, that gets the internet
 working ... ;
 Veracrypt is slow but it works, LUKS is weak, but has
 uses ... ;
 I chose Arco Arch Linux BC I did not have Constant Issues ... ;
 Everyone is now using Sixty Four Bit so move on with that ... ;
 Everyones got a Rode, Sure, CAD, Sennheiser Microphone so
 what ... ;
 You are not special if you have a RODE shotgun Mic so Forget it
 ... ;
 You want to know how lame I am, Integrated Graphics,
 No Major AMD GPU and GNU/Linux Arch Arco Linux ... ;
 sudo pacman -Sc sudo pacman -Syu then REPO ... ;
 I had some problems with Linux also, I only wanted it
 because it was free, I did a full software Update,

then I checked with Clamtk Antivirus and found some
lame exploits on the system, so I deleted them, most
of it was the Browser, So I cleared all my Browser Data,
then re-linked accounts with my Cell Phone, A degoogled
Phone, then of course AMD GPUS are only worth it on Winodows
or Mac OS and not Linux, Linux only has OpenGL so the only
good GPU for Linux is Integrated, unless you're doing Steam
then get yourself an AMD GPU, but you'll need drivers for
Linux for getting past 60fps, also In order to get past that
sixty you need Windows or Mac OS, No Contest Period, Linux
only has that OpenGL Crap, BSD is much worse and supports
almost no hardware so BSD is the worst one I only used
NOMADBSD for small things and that was it it was a Simpleton
OS, Again Arch Linux is a good Option so is LMDE another one
and Ubuntu finally sold out with the SNAP Crap of course ... ;
Yeah an External GPU might be an option, then maybe add an
SSD to that GPU that would be cool too and give it memory ... ;
I literally get an extra SSD for more Memory and use it as
a swap to calculate big math problems that use up all Thirty
Two Gigabytes of RAM and those math problems discovered Zero
Point Nine Five Three Six and PHI PI and One Four Four
Seven ... ;
That is the Sacred Geometry Stuff you can find with
Librecad ... ;
AMD makes the best GPUS so far, then NVIDIA is Windows Only,
AMD supports Linux and Windows, but extensively is designed
mostly for Windows so Windows becomes the only Gaming OS,
again,
not a gamer here, I have no life, but I do other things, so it
is
kinda weird, I do not get it either, Anyways if you ever bother
with
Linux, All OSES get malware, use ClamTK on Linux, Update all
your software,
Use The Terminal, Bas6432 your files so they do not get
deleted, The Good
File Systems are Ext4, LUKS, Fat32, and Exfat, and we know that
NTFS stands
for Not That File System which is why no one usese NTFS file
systems ... ;
We are a very biased community, we only use SSDS, we do our
antiforensics as
usual, I just wanted to note that how I am forced against my
will to BE PC
BC Special Agent of FBI Mike Moore Arrived at door over a Shit
Post that I

had to fix up by saying I would never conspire or contest to
any of that,
that was my sworn statement that got the FBI to finally leave
me alone,
along with that was my Major Antiforensics work, where I had to
go through
every file system and clean that junk up and I mean Literally,
Also SSDS
are the only good option for Targeted Individuals, Period, No
Contest ... ;
Again AMD works with Both Linux Windows Mac and is the King of
GPUS ... ;
When I was like Twelve years old the children played The Sims
on an AMD
GPU and Starcraft on and AMD GPU and now this integrated
graphics intel
stuff I can only Do OPENGGL for simple things such as Emulators
or just
simply not gaming at all and Video Work since Linux seems to
work better
with Videos than BSD, BSD being the worst one out of the three
Seriously,
BSD has the worst file systems ever made, Linux is still better
and Windows
still has Fat32 and Exfat as Superior File Systems for Embedded
Systems, I
use embedded systems all the time such as Scanners,
Televisions, just to
watch Mpegs or PDF files which you can actually do on a TV
which gives the
TV better use then looking at propaganda made up by Six
Talmudic Jews ... ;
